

PLANNING ARTIFACT · NOT A CONTRACT OR ROI CLAIM

A controlled 90-day founder discovery pilot.

A procurement-ready starting point for testing whether an evidence-gated founder pathway can complement existing workforce services—without replacing income support, job placement, or participant choice.

1. Pilot question

Primary question: Can a voluntary, scenario-based assessment plus a seven-day market sprint identify participants who can form and test credible local business hypotheses at an acceptable cost and risk?

2. Recommended cohort

Discovery cohort

10–20 participants

Large enough to observe friction; small enough for high-touch safeguards.

Duration

90 days + follow-up

Baseline, seven-day evidence sprint, selective incubation, then six- and twelve-month checks.

Eligibility

Adults who opt in, can give informed consent, and have lived proximity to a testable problem. Founder participation is never a condition of benefits.

Exclusions

No coercive referral, no promise of success, no regulated-data collection in free text, and no automatic adverse decision from an assessment score.

3. Operating flow

1. Eligibility, accessibility check, informed consent, and baseline.
2. Scenario-based Founder DNA assessment with limitations explained.
3. One local problem and explicit opportunity hypothesis.
4. Seven-day evidence sprint: interviews, contradictions, commitments, and costs.
5. Human continue / pivot / stop gate with reasons recorded.
6. Selective 90-day support for qualified, consenting participants.
7. Outcome follow-up at 6 and 12 months, including failures and adverse events.

4. Safeguard protocol

Risk	Required control	Evidence retained
Assessment overreach	Signals are decision aids, never destiny or eligibility scores.	Versioned scoring method and founder-visible explanation.
AI error	Human review before outreach, spending, filing, or customer promises.	Prompt context, output, edits, approval, and model receipt.
Privacy	Data minimization, RLS isolation, retention schedule, export, and deletion path.	Consent record, access log, and deletion receipt.
Financial harm	Predeclared spend caps; no autonomous payment or debt recommendation.	Budget approval and transaction source.
Program bias	Monitor full funnel and outcomes by agreed demographic groups.	Denominators, drop-off, overrides, and adverse outcomes.
Professional advice	Licensed legal, tax, accounting, and benefits review where required.	Referral/handoff status—not fabricated completion.

5. Measurement contract

Funnel

- Eligible
- Invited
- Consented
- Activated
- Completed
- Incubated

Market evidence

- Interviews with sources
- Repeated pain signals
- Commitments
- Paid pilots
- Contradictions

Company outcomes

- Incorporations
- Verified revenue
- Founder income
- Jobs created
- Survival at 6/12 months

Program integrity

- Cost per participant
- Model and staff cost
- Drop-off
- Overrides
- Adverse outcomes

No causal claim without a comparison design. Agree the baseline and counterfactual before launch; report confidence limits and missing follow-up rather than only success stories.

6. Decision gates

Gate	Continue when	Stop or redesign when
Day 0	Consent, accessibility, and a testable problem are present.	Participation is coerced, support conflicts exist, or risk is unmanaged.
Day 7	Independent evidence supports a narrow next experiment.	No repeated pain, inaccessible customer, or material harm risk.
Day 30	A customer takes a costly action or accepts a controlled pilot.	Only compliments exist, economics fail, or founder chooses to stop.
Day 90	Verified revenue/outcome signal and an operationally credible next plan.	No viable route, unsustainable workload, or safeguard breach.

7. Roles and accountability

Agency

Eligibility, benefits boundary, procurement, accessibility, participant support, evaluation ownership, and escalation.

Founder DNA operator

Product delivery, training, model controls, security, incident response, data export, and transparent reporting.

Founder

Voluntary choices, evidence collection, approvals, corrections, and the right to pause or exit without penalty.

Independent evaluator

Baseline, comparison method, missing-data treatment, outcome verification, and final limitations.

8. Budget worksheet

Cost line	Planning input	Actual
Participant support / stipends	_____	_____
Facilitation and case management	_____	_____
Technology and model usage	_____	_____
Professional referrals	_____	_____
Independent evaluation	_____	_____
Accessibility and contingency	_____	_____

9. Launch checklist

- Named program owner, data owner, security contact, and escalation contact.
- Counsel-reviewed consent, privacy notice, retention, and deletion schedule.
- Accessibility and language-access review.
- Predeclared cohort, baseline, comparison, metrics, and stop rules.
- Test accounts and least-privilege integration credentials.
- Incident response tabletop and participant complaint pathway.
- Public report template covering failures, costs, and adverse outcomes.
